Redaction Summary Report

Section 1: Incident 24019623
Event ID: 2400182124
Claimed Redactions: 30
Statutory Basis: C.R.S. § 24-72-303(4)(b)(II)

Summary:
- The exception log claims 30 redactions across multiple files tied to Incident 24019623.
- Only a small number of visible redactions appear in the released documents.
- Redactions span: the Incident Report, Event Report, and possibly other unprovided records (e.g. BWC, metadata).

Visible Redactions Found:
1. Incident Report (Incident_24019623-Redacted.pdf)
   - Victim's name inconsistently redacted.
   - Narrative section hides identity; case header reveals it.
   - Violates consistency and undermines statutory justification.

2. Event Report (Event ID 2400182124-Redacted.pdf)
   - 4 visible redactions, likely dispatchers or internal system tags.
   - No signs of sensitive victim/witness data redacted here.

3. Other Reports Referenced by Exception Log:
   - None of the 6 additional summaries (22-0129 through 24-0205) contain visible redactions,
     aside from 1–2 instances of staff names (e.g. records employee, reviewing officer).
   - These do not qualify as protected under § 303(4)(b)(II).

Evaluation:
- Majority of claimed redactions not observable.
- Use of § 303(4)(b)(II) seems overly broad.
- Some redactions may be unjustified or constitute waiver (e.g. inconsistent victim redaction).

Section 2: Event 2400182124 Exception Log
Claimed Redactions: 17
Statutory Bases:
- C.R.S. § 24-72-303(4)(b)(II): Victim/Witness Contact Info
- C.R.S. § 24-72-305(5) + 28 CFR 20.21(f)(2): Criminal Justice Info
- C.R.S. § 24-72-305(5): Intelligence Data

Findings:
- Most redactions appear to involve dispatcher or caller identity data.
- Intelligence-based claims (Items 8, 14) are weak unless tied to active investigations or informants.
- All visible redactions were procedural, not tactical or personal.

Conclusion:
- 17-item redaction log appears largely lawful, with 2 questionable claims under 'intelligence'.
- No clear justification for applying intelligence exceptions in a standard event dispatch log.
